Public Consultation of the European Commission on Circular Economy.

In August 2015 Eurima provided input to the Public Consultation of the European Commission on Circular Economy. The construction sector is generally recognised as one of the sectors most concerned by resource efficiency. This reality was not enough reflected in the public consultation with only a limited number of questions related to construction products and no questions at all covering the building level. In fact, the biggest potential for increasing resource efficiency in the construction sector can be found at building-level.

Eurima is in favour of putting more focus on the Circular Economy and Resource Efficiency. The paradigm-shift towards a circular economy should be facilitated by soft measures such as harmonisation of standards, improved databases, readily available information for consumers ...etc. It will be necessary to frame this within a coherent, consistent and well-balanced legislative framework including landfill bans for recyclable products, improved interface between waste and chemical legislation, ..., while environmental benefits should always be quantified/qualified through Life Cycle Analysis.

In the document attached you will find the Eurima answers to this Public Consultation.

Frequently Asked Questions on the Consultation on Circular Economy - the file is available for download here:
FAQs Circular Economy.pdf

1 Introduction

Global competition for resources is increasing. Supply concentration of resources, particularly critical raw materials outside the European Union, makes European industry and society dependent on imports and increasingly vulnerable to high prices, market volatility, and the political situation in supplying countries. At the same time, natural resources are often used unsustainably across the globe, causing additional pressure on raw materials, environmental degradation and threats to ecosystems. This trend will increase with changes in world population and patterns of economic growth.

A ‘circular economy’ aims to maintain the value of the materials and energy used in products in the value chain for the optimal duration, thus minimising waste and resource use. By preventing losses of value from materials flows, it creates economic opportunities and competitive advantages on a sustainable basis.
Moving towards a more circular economy can promote competitiveness and innovation, a high level of protection for humans and the environment, and bring major economic benefits, thus contributing to job creation and growth. A circular economy fosters sustainable development in which environmental, economic and social dimensions go hand in hand. It can also provide consumers with longer-lasting and innovative products that save them money and improve their quality of life.

A successful transition towards a circular economy requires action at all stages in the value chain: from the extraction and transportation of raw materials, through material and product design, production, distribution and consumption of goods, repair, remanufacturing and reuse schemes, to waste management and recycling.

In December 2014, the Commission announced the withdrawal of its legislative proposal for the review of waste legislation, to be replaced by a new, more ambitious, initiative for the promotion of the circular economy by the end of 2015.

This initiative aims at promoting the transition to the circular economy through a comprehensive, coherent approach that fully reflects interactions and interdependence along the whole value chain, rather than focusing exclusively on one part of the economic cycle. It will comprise a revised legislative proposal on waste and a Communication setting out an action plan on the circular economy for the rest of this Commission’s term of office. The action plan will cover the whole value chain, and focus on concrete measures with clear EU added value, aiming at ‘closing the loop’ of the circular economy. The circular economy initiative will also contribute to wider EU objectives such as the Energy Union, the climate objectives and resource efficiency.

Input from stakeholders and the public will be a key factor in the preparation of this work. The objective of this public consultation is to help the Commission to pinpoint and define the main barriers to the development of a more circular economy and to gather views regarding which measures could be taken at EU level to overcome such barriers.

Public consultations on the review of EU waste targets and on the sustainability of the food system took place in 2013 [The results of these public consultations can be found here]. This consultation therefore focuses on other points relating to the transition to a circular economy, broadening the scope of inquiry to other parts of the economic cycle (e.g. the production and consumption phases) and general enabling framework conditions (e.g. innovation and investment). Please note that a separate public consultation on waste market distortions will be launched shortly. Stakeholders interested in waste markets may wish to respond to that consultation as well.

2 General information about respondents

*2.1. In what capacity are you completing this questionnaire?

- As an individual / private person
- Public authority
- Academic/research institution
- International organisation
- Civil society organisation
- Professional organisation
- Private enterprise
- Other
Does your company/organization make use of any of the following?

- EU eco-label
- EMAS
- Another environmental labelling or management scheme
- No environmental labelling or management scheme
- I don’t know

Please indicate the sectors your organisation represents

- Construction
- Energy
- Chemicals
- Information and communication technologies
- Furniture
- Food and drink
- Hotel and catering industry
- Repair services
- Transport
- Manufacturing
- Electrical and electronic goods
- Textiles and clothing
- Agriculture and fishery
- Distribution (logistics, wholesale, retail)
- Recycling and other waste management
- Other: please indicate

Where are your member companies located?

- EU MS/ EEA
- Non-EU MS/ EEA

Please specify EU Member States/EEA countries of your member companies:

- Austria
- Belgium
- Bulgaria
- Croatia
- Cyprus
- Czech Republic
- Denmark
- Estonia
- Finland
- France
- Germany
- Greece
- Hungary
- Iceland
- Ireland
- Italy
- Latvia
- Liechtenstein
- Lithuania
- Luxembourg
- Malta
- Netherlands
- Norway
- Poland
- Portugal
- Romania
- Slovakia
- Slovenia
- Spain
- Sweden
- Switzerland
- United Kingdom
- United Kingdom

If your organisation is not registered, you can register now

2.2. Please give your country of residence/establishment

- EU MS/ EEA
- Non-EU MS/ EEA
Please specify the EU MS/EEA country of your establishment:

- Austria
- Belgium
- Bulgaria
- Croatia
- Cyprus
- Czech Republic
- Denmark
- Estonia
- Finland
- France
- Germany
- Greece
- Hungary
- Iceland
- Ireland
- Italy
- Latvia
- Liechtenstein
- Lithuania
- Luxembourg
- Malta
- Netherlands
- Norway
- Poland
- Portugal
- Romania
- Slovakia
- Slovenia
- Spain
- Sweden
- Switzerland
- United Kingdom

2.3. Please indicate your preference for the publication of your response on the Commission’s website:

- Under the name given: I consent to publication of all information in my contribution and I declare that none of it is subject to copyright restrictions that prevent publication
- Anonymously: I consent to publication of all information in my contribution and I declare that none of it is subject to copyright restrictions that prevent publication
- Not at all — please keep my contribution confidential (it will not be published, but will be used internally within the Commission)

2.4. How well informed are you about the circular economy initiative?

- Very well informed
- Fairly well informed
- Not very well informed
- Not informed at all

2.5. Please give your name if replying as an individual/private person, otherwise give the name of your organisation

200 character(s) maximum

Eurima

If your organisation is registered in the Transparency Register, please give your Register ID number.

200 character(s) maximum

ID 9834563163122

2.6. Please provide your email address if you would like to be informed of the outcome of this consultation

200 character(s) maximum

marc.bosmans@eurima.org

3 Production phase
The design of a material or product can facilitate recycling, extend its lifetime through reuse, refurbishment or repair and reduce its environmental impact by reducing its energy, waste generation or water consumption over its life cycle.

This section seeks your views on actions that you think the EU should take to promote the circular economy in the production stage, including product design, production and sourcing of materials.

3.1. How would you assess the importance of the following measures to promote circular economy principles in product design at EU level?

<table>
<thead>
<tr>
<th>Measure</th>
<th>very important</th>
<th>important</th>
<th>not very important</th>
<th>not important</th>
<th>no opinion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Establish binding rules on product design (e.g. minimum requirements on 'durability' under Ecodesign Directive 2009/125/EC)</td>
<td>🗳️</td>
<td>🗳️</td>
<td>🗳️</td>
<td>🗳️</td>
<td>🗳️</td>
</tr>
<tr>
<td>Encourage industry-led initiatives (i.e. self-regulation)</td>
<td>🗳️</td>
<td>🗳️</td>
<td>🗳️</td>

</tr>
</tbody>
</table>

Glossary:

**Legal guarantees**: Tangible goods have a minimum two-year legal guarantee under EU consumer legislation (Directive 99/44/EC). This guarantee makes the seller liable to the consumer for any lack of conformity with the sales contract which exists at the time of delivery of the good and becomes apparent within two years from delivery of the goods.
Commercial guarantees: Guarantees provided by traders to consumers on a voluntary basis, by which the trader undertakes to reimburse the price paid or to replace, repair or handle consumer goods in any way if they do not meet the specifications set out in the guarantee statement or in the relevant advertising.

If you think that additional options not listed above should be considered, please specify:

200 character(s) maximum

Mandatory sust. assessment at building level, based on existing standards, to improve sustainability of buildings, supported by EPD on product level. EPR for long life time products will not function.
3.2. In order to facilitate the transition to a more circular economy, how would you assess the importance of the following product features?

<table>
<thead>
<tr>
<th>Feature</th>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

If you think that other considerations not listed above should be taken into account, please specify:

200 character(s) maximum

The functionality of the building, related to wellbeing, creates a better performance for the consumer and a longer life time of the building.
3.4. From a circular economy perspective, in your view which product categories should be given priority in the next few years and why?

*at most 3 choice(s)*

- White goods (e.g. dishwashers, refrigerators)
- Small domestic appliances (e.g. microwave ovens, food processors)
- Office equipment (e.g. computers, printers)
- Small electronics (e.g. smartphones, cameras)
- Packaging materials
- Heating equipment (e.g. boilers, water heaters)
- Air-conditioning and ventilation systems
- Lighting products
- Motors and pumps
- Industrial equipment
- Clothing and textiles
- Furniture
- Cars
- Construction products (e.g. windows, insulation materials)
- General measures (concerning a broad range of products) should be taken
- Others

If you think that other product categories not listed above should be taken into account, please specify:

*200 character(s) maximum*

Buildings
Please give reasons for your choice: others

Buildings are considered as one of the three main sectors for resource efficiency (together with transport and agriculture). The significance of the resource use linked to the sector is highlighted by the Roadmap to a Resource Efficient Europe: "Construction and use of our buildings in the EU influence 42% of our final energy consumption, about 35% of our greenhouse gas emissions, more than 50% of all extracted materials and 30% of our water consumption". The sector further gives rise to about 35% of total generated waste.

Buildings should be a top priority as they are the main consumers of resources. They are part of the problem and part of the solution. The long life cycle of the building makes it necessary to act as soon as possible to obtain the necessary benefits in the future. The construction industry has one of the most difficult value chains to transform as it is composed of a large number of different expertise and a lot of SMEs. This creates a situation where a lot of entities need to be convinced to achieve the necessary paradigm shift.

Building performance will not be solved by focusing exclusively on the construction products. Building performance will be improved through the optimization of systems (walls, roofs …) which implies the right combination of products (building design).

3.5. Which of the actions listed below should be given priority at EU level to promote circular economy solutions in production processes?

<table>
<thead>
<tr>
<th>Action</th>
<th>very important</th>
<th>important</th>

</tr>
</tbody>
</table>

3.7. Do you have any other comments about the production phase?

500 character(s) maximum

4 Consumption Phase

The consumers’ perspective is an essential part of the circular economy. On the one hand, consumers make choices about the products they purchase and use; on the other hand these choices are affected by a range of factors, including the behaviour of other people, the way consumers receive information or advice, the availability of repair and maintenance services, and the perceived costs and benefits of their choices.

This section seeks your views on the best way to promote the circular economy in the consumption phase.

4.1. How would you assess the importance of the following measures to promote circular economy principles in the consumption phase at EU level?
<table>
<thead>
<tr>
<th></th>
<th>very important</th>
<th>important</th>
<th>not very important</th>
<th>not important</th>
<th>no opinion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Provide more information relevant to the circular economy to consumers, for example on expected lifetime of products or availability of spare parts</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Ensure the clarity, credibility and relevance of consumer information related to the circular economy (e.g. via labels, advertising, marketing etc.) and protect consumers from false and misleading information in this respect</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Organise EU-wide awareness campaigns to promote the circular economy</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Improve/clarify rules and practices affecting consumer protection (e.g. relating to legal and commercial guarantees)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Take action on product and material design (see section 3)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Encourage financial incentives to consumers at national level (e.g. by differentiated taxation levels depending on products’ resource efficiency)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Take measures targeting public procurement (e.g. through criteria for Green Public Procurement)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
4.2. Which products should be a priority for EU action to promote more sustainable consumption patterns and why?

*at most 3 choice(s)*

- White goods (e.g. dishwashers, refrigerators)
- Electronics
- Food and beverages
- Packaging materials
- Clothing and textiles
- Furniture
- Cars
- Construction products
- General measures (concerning all consumer products) should be taken
- Other — please specify below

If you think that further options not listed above should be considered, please specify:

200 character(s) maximum

```plaintext
Buildings
```

Please give reasons for your choice: construction products

200 character(s) maximum

```plaintext
Construction products should be tackled indirectly, as elements integrated in buildings (the largest consumers of resources). --> see below
```
A circular economy will only be reached through a holistic approach. In parallel to the focus on certain products a transversal approach will be necessary.

Consumers should have information to make well-informed choices about the building they buy or rent.

Secondary raw materials are waste materials which are to be sold and used for recycling in manufacturing. At present, they still account for a very small portion of the material used in the EU. The quality and supply of secondary raw materials depends greatly on waste management practices and the degree of separation of material streams at source. However, other barriers to the development of markets for secondary raw materials can be identified. Some of these barriers may be of a horizontal nature, while others may only be relevant to specific types of material.
5.1. In your view, what are the main obstacles to the development of markets for secondary raw materials in the EU?

<table>
<thead>
<tr>
<th>Obstacle</th>

</tr>
</tbody>
</table>
If you think that other obstacles not listed above are relevant, please specify:

200 character(s) maximum

Buildings and construction products are missing in the list. we cannot judge other materials as a specific association. Elements of the list may be important for buildings (and products) too.

Glossary:

Bio-nutrients- Recovered material such as nitrogen, or phosphorus and organic matter (from e.g. sewage sludge and farm organic matter residues), for use as fertiliser.

Construction aggregates- Coarse particulate material used in construction, including sand, gravel, crushed stone or slag.

Critical raw materials- Critical raw materials are raw materials of great economic importance to the EU, with a high risk of disruption of supply. The European Commission has listed them here: http://ec.europa.eu/enterprise/policies/raw-materials/critical/index_en.htm

5.2. In your view, what are the most relevant actions to take at EU level to remove the obstacles you have identified as significant? Please be specific

Lack of information or misinformation about the quality of recycled materials

500 character(s) maximum

A pre-demolition inventory would provide the necessary information throughout the building chain to optimally recycle the construction products. A building passport containing information on the products used in the building would provide the information to correctly prepare for the selective deconstruction of the building.

Cost differential between primary and secondary raw materials

500 character(s) maximum

The true valuation of the secondary raw materials (for example based on life cycle costing) in comparison with that of the raw materials would facilitate the uptake of secondary raw materials.

Regulatory obstacles at EU level

500 character(s) maximum

The transboundary transport of waste to be recycled is burdensome. Waste streams which can be hazardous or non hazardous have no strong framework to function in.

Regulatory gaps at EU level
A landfill ban for recyclable products would create an incentive to create recycling routes. Industry needs long-term perspectives to make the necessary investments.

Incineration should be limited as much as possible. Incineration is still too much seen as an easy and cheap solution to avoid recycling. Also here long-term perspectives are needed.

**Regulatory gaps at national/regional/local level**

A pre-demolition inventory would provide the necessary information throughout the building chain to optimally recycle the construction products.

A building passport containing information on the products used in the building would provide the information to correctly prepare for the selective deconstruction of the building.

**Lack of reliable data on secondary raw material flows**

For construction products there is as well a lack concerning the available information on amounts of secondary raw materials as an uncertainty concerning the way the recycled content has been calculated for different products.

5.3. Which secondary raw materials markets should the EU target first to improve the way they work?

at most 3 choice(s)

- Bio-nutrients (e.g. nitrogen, phosphorus and organic matter from e.g. sewage sludge and farm organic matter residues) for fertiliser use
- Construction aggregates (i.e. coarse particulate material used in construction, including sand, gravel, crushed stone, slag)
- Critical raw materials such as rare earth elements or certain precious metals
- Glass
- Metals
- Paper
- Plastics
- Wood/Biomass
- Other — please specify below

If you think that other approaches not listed above should be considered, please specify:

For construction products, there is currently no focus on lightweight material, but which can be voluminous, so it could be valuable to
include them. The target for construction and demolition waste is a mass-based target. This incentivizes only the recycling of the more heavy materials.

Please give reasons for your choice: Other

5.4. Do you have any other comments about the development of markets for secondary raw materials?

500 character(s) maximum

6 Sectoral measures

Certain sectors may require a tailored approach in order to ‘close the loop’ of the circular economy, and some could be made strategic priorities in order to accelerate the transition.

This section seeks your views on which sector(s) should be considered a priority for EU action, and which relevant measures or actions should be taken.

6.1. In your view, which sectors should be a priority for specific EU action on the circular economy and why?

at most 3 choice(s)

- Agriculture
- Bio-nutrients (e.g. from sewage sludge or farm organic matter residues) for use in fertilisers
- Chemical industry and process manufacturing
- Construction/demolition and buildings
- Electrical and electronic goods
- Energy
- Fisheries/ aquaculture
- Food and drinks, including reduction of food waste
- Forest-based and other bio-based products
- Furniture
- Information and communication technologies
- Mining and quarrying
- Plastics
- Retailing
- Services
- Textiles
- Transport
- Water sector/sewage treatment
- Other- please specify below
6.2. For the sectors that you have selected, what measure(s) would be needed at EU level?

Construction/demolition and buildings

500 character(s) maximum

- Building passport (see above)
- Pre-demolition audit (see above)
- Sustainability assessment of buildings (based on lifecycle thinking and performance based approach). Full building assessments make it possible to avoid burden shifting between the different life cycle stages of the building. An assessment method as this gives the opportunity of optimizing the building in function of local specificities.
- Ban landfilling of recyclable materials. (see above)

7 Enabling factors for the circular economy, including innovation and investment

Enabling factors are essential to support the development of the circular economy could include supporting the development, dissemination and uptake of innovative solutions, investing in technology and infrastructure, supporting SMEs and developing the required skills and qualifications.

This section seeks your views on the role of these enabling factors in the development of the circular economy.

7.1. How important are the following enabling factors in promoting the circular economy at EU level?

<table>
<thead>
<tr>
<th>Financial innovation projects or technologies relevant to the circular economy (from EU funds, e.g. Horizon 2020)</th>
<th>very important</th>
<th>important</th>
<th>not very important</th>
<th>not important</th>
<th>no opinion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Public incentives (e.g. financial guarantees) for private investors to finance projects conducive to the circular economy</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Support for the development of circular economy projects (e.g. technical assistance)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Support for innovative systemic approaches and cross-sectoral cooperation (e.g. industrial symbiosis and cascading use of resources)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>---</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Partnerships with public authorities to help innovative businesses overcome potential legal obstacles to innovation</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Promotion of innovative business models for the circular economy (e.g. leasing and sharing)</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Specific measures to encourage the uptake of the circular economy among SMEs</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Exchange and promotion of best practice</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Promoting the development of skills/qualifications relevant to the circular economy</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Support for capacity-building in public administrations</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Support for market penetration of innovative projects through labelling, certification and standards, public procurement for innovation, etc.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Better monitoring the implementation and impact of policies contributing towards the circular economy agenda</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Increasing the knowledge base by collecting and...</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
If you think that other measures not listed above should be considered, please specify:

200 character(s) maximum

A larger/ better deployment of LCC that takes into account externalities.

7.2. Do you have any other comments about enabling factors to promote the circular economy?

500 character(s) maximum

8
