Certification of carbon removals – EU rules

Introduction

Responding to the urgency of climate action highlighted in the successive assessments of the Intergovernmental Panel for Climate Change (IPCC), the European Union has set in law its objective of economy-wide climate neutrality by 2050. The European Climate Law requires greenhouse gas (GHG) emissions and removals to be balanced within the European Union at the latest by 2050, with the aim of achieving negative emissions thereafter. Each single tonne of CO2eq emitted into the atmosphere will have to be neutralised by a tonne of CO2 removed from the atmosphere. To scale up carbon farming and industrial solutions for removing carbon from the atmosphere, the European Commission is working towards a legislative proposal in 2022 on a regulatory framework for the certification of carbon removals.

As underlined in the Communication on Sustainable Carbon Cycles, the establishment of the certification framework will be an essential stepping stone towards the transparent recognition of activities that remove carbon from the atmosphere in an environmentally sound manner. The certification rules should therefore set scientifically robust requirements for quality of measurement, monitoring, reporting and verification of the carbon removed from the atmosphere, the duration of the storage, the risk of reversal and the risk of carbon leakage increasing GHG emissions elsewhere. Requirements should also be set for the amount and type of energy used for the carbon removal process. The certification rules should put in place robust safeguards to make sure that carbon removal activities do no harm to biodiversity and other sustainability objectives. This is important to ensure that the EU can claim domestic climate neutrality while helping to achieve other objectives of the European Green Deal.

This public consultation invites public administrations, academic institutions, businesses, organisations and individuals to contribute to the preparation of an EU regulatory framework for the certification of carbon removals. The findings of the consultation (which will be summarised and published) will inform the impact assessment accompanying the Commission proposal on this initiative.

Guidance on the questionnaire

This public consultation consists of some introductory questions on your profile, followed by a questionnaire. Please note that you are not obliged to reply to all questions.

At the end of the questionnaire, you are invited to provide any additional comments and to upload additional information, position papers or policy briefs that express the position or views of yourself or your organisation.
The results of the questionnaire and uploaded position papers and policy briefs will be published online. Please read the specific privacy statement attached to this consultation stating how personal data and contributions will be dealt with.

In the interest of transparency, if you are replying on behalf of an organisation, please register with the register of interest representatives (if you have not already done so). Registering commits you to complying with a code of conduct. If you do not wish to register, your contribution will be handled and published with contributions received from individuals.

The Commission will publish all contributions to this public consultation. You can choose whether you would prefer to have your details published or to remain anonymous when your contribution is published. For the purpose of transparency, the type of respondent (for example, ‘business association’, ‘consumer association’, ‘EU citizen’) country of origin, organisation name and size, and its transparency register number, are always published. Your e-mail address will never be published.

Opt in to select the privacy option that best suits you. Privacy options default based on the type of respondent selected.

**Contribution publication privacy settings**

The Commission will publish the responses to this public consultation. You can choose whether you would like your details to be made public or to remain anonymous.

- **Anonymous**
  
  Only organisation details are published: The type of respondent that you responded to this consultation as, the name of the organisation on whose
behalf you reply as well as its transparency number, its size, its country of origin and your contribution will be published as received. Your name will not be published. Please do not include any personal data in the contribution itself if you want to remain anonymous.

**Public**
Organisation details and respondent details are published: The type of respondent that you responded to this consultation as, the name of the organisation on whose behalf you reply as well as its transparency number, its size, its country of origin and your contribution will be published. Your name will also be published.

☑️ I agree with the [personal data protection provisions](#)

**Questions**

**Scope**

Question 1: What in your view are the main challenges regarding the integration of carbon removal in EU climate policies?  
*at most 3 choice(s)*

☑️ Ensuring that strong action to reduce emissions is not undermined by shifting focus on carbon removals.
☐ Ensuring a net contribution from removals to the achievement of climate neutrality.
☐ Ensuring precise, accurate and timely measurement for removals.
☑️ Providing sufficient guarantees for the duration of carbon storage and the prevention of reversals.
☑️ Avoiding potential negative environmental impacts and complying with sustainability principles.
☐ Fostering cost-effective carbon removal solutions.
☐ Guaranteeing transparency of the benefits and costs of carbon removals.
☐ Setting appropriate baseline and demonstrating the additionality of removals.
☐ Other

Question 2: What should be the main criteria defining the types of carbon removals that EU climate policies should incentivise?  
*at most 3 choice(s)*

☐
Technical readiness and economic feasibility

- Potential for deployment at large scale
- Robustness of monitoring, reporting and verification aspects
- Affordability of monitoring, reporting and verification aspects
- Duration of carbon storage
- Risk of intentional or unintentional reversal of carbon removals
- Potential environmental co-benefits
- Potential social benefits
- Other

Question 3: Taking account of the aspects identified in the previous question, what carbon removal solutions should EU climate policies incentivise and in what time horizon?

### Carbon farming solutions enhancing ecosystem removals

Geological storage of non-fossil CO2

Bio-based products with long lifetime (including for construction)

Utilisation of non-fossil CO2 in long lifetime products

Enhanced rock weathering

Other

Would you have any additional comments on scope, please specify:

2500 character(s) maximum

Priority should be to exhaust the solutions to permanently or long-term capture carbon first and then to focus on other solutions such as biobased products which could probably in temporary carbon capture manner. It is also important to allow sufficient time for the forest industry to prepare for that solution.

About the utilisation of non-fossil CO2 in long lifetime products, the certification should be applicable only for mature/robust technologies.

The benefits of a certification framework to scale up high-quality carbon removals over the coming years

Question 4: Would you agree that establishing a robust and credible certification system for carbon removals is the first essential stepping stone towards achieving a net contribution from carbon removals in line with the EU climate-neutrality objective?

- Yes
- No
- No opinion

Question 5: What would be the main objectives for the certification of carbon removals?

at most 3 choice(s)

- To increase the transparency and level playing field of voluntary carbon markets.
- To allow comparability and competition between different carbon removal solutions
To provide better public incentives for nature-based and industrial carbon removals in EU and national funding programmes.

To provide better financial incentives for land managers (e.g. purchasers of food and biomass products reward climate-friendly agriculture through price premiums or incentive payments – often called ‘in-setting’).

To provide better financial incentives for carbon-storage products (e.g. bio-based products, woody construction material).

To increase transparency in corporate sustainability reporting and foster the credibility of climate-neutrality claims.

To support the labelling of sustainable products.

Other

The role of the EU in the certification of carbon removals

Question 6: Which role should the EU take in the certification of carbon removals?

- Voluntary carbon markets work well. There is no need for an additional intervention by the EU.
- The EU should establish minimum standard requirements on reporting transparency for carbon removals.
- The EU should establish comprehensive standard requirements for carbon removals, e.g. on monitoring, reporting and verification, on the duration of the removal or baseline setting and additionality.

Question 7: What functions in the certification process should be carried out by private or public entities?

<table>
<thead>
<tr>
<th>Function</th>
<th>Independent private entities</th>
<th>Public administration</th>
<th>No opinion</th>
</tr>
</thead>
<tbody>

<td>☐</td>
<td>☐</td>
<td>☐</td>
</tr>
</tbody>
</table>

Would you have any additional comments on the role of the EU in the certification, please specify:

2500 character(s) maximum
The establishment of certification methodologies should be the role of EU. Regarding the accreditation of certification bodies this could also be done by independent private entities. Validation and verification of carbon removals should set strict criteria on who qualifies to be considered from the independent private entities.

Certification methodologies

Question 8: Carbon removal solutions can differ significantly, for example as regards duration of removals or robustness of monitoring, reporting and verification. In this context, do you think an EU certification framework should allow different types of certificates for different types of removals?

- The EU certification framework should define only the minimum criteria for the certification and should not comprehensively define the certificates.
- The EU certification framework should only allow a single type of certificate to ensure equivalence of certified carbon removals.
- The EU certification framework should allow different types or sub-categories of certificates to better reflect the diversity of carbon removal solutions and their characteristics.

Question 9: Apart from diverging durations of existing carbon removal solutions, storage may also be prematurely interrupted and carbon may consequently be released back into the atmosphere. What approach could better manage this risk of intentional or unintentional reversal of carbon removals?

- Make removal providers liable for any reversal of removals and require them to offset any reversal.
- Encourage or require carbon removal providers to set up insurance systems or multi-project pooling mechanisms.
- Require commitment to multi-year monitoring plans at the outset of the certification procedure.
- Issue certificates with specific durations (e.g. 5, 7 or 10 years) that can be renewed.
Require methods with a risk of reversal to be discounted or require a share of the removals to be stored in a buffer account (e.g. 10 to 25 per cent of the expected removals).

☐ Other

Please specify:

500 character(s) maximum

Issue certificates should enable more transparency on the duration of the removals and encourage long-term carbon removals.

Question 10: In voluntary carbon markets, the use of baseline and additionality concepts aims to quantify and reward only additional removals, i.e. those that go beyond a pre-identified baseline and would not have occurred in the absence of the incentives from the carbon removal mechanism. To what extent do you think the EU certification framework should include the concepts of baseline and additionality?

☐ The EU certification should establish a single methodology to define the baselines and assess additionality.

☐ The EU certification framework should allow for a variety of baselines and additionality criteria to cater for different types of removals.

☐ To best adapt to the use of the certificates in a specific context, the certification framework should not prescribe definitions for baseline and additionality criteria.

☐ Other

Question 11: What information should the certification for carbon removal disclose?

☑ Type of carbon removals

☑ Quantity of carbon removed

☑ Information on the carbon removal provider

☑ Information on the certificate owner

☑ Information on monitoring, reporting and verification processes

☑ Duration of carbon storage

☑ Risk coverage and safeguards on sustainability objectives

☐ Environmental benefits

☐ Other
Social benefits

- Information on the baseline and additionality of the removal
- Information on the use of the certificate and its contribution to the Paris Agreement with a view to avoiding double counting
- Price if the certificate has been traded
- Other

Would you have any additional comments on certification methodologies, please specify:

2500 character(s) maximum

Final remarks

Finally, are there any other important aspects that should be considered in establishing a regulatory framework for the certification of carbon removals in the EU?

- Yes
- No

Please provide your additional remarks:

5000 character(s) maximum

Eurima recognizes the contribution of carbon removals as a complementary solution to carbon emissions reduction in order to achieve EU Carbon Neutrality by 2050. The dimension of carbon removals needs to be accounted for in a separate manner, in order to not distract from the priority to reduce carbon emissions.

Our industry supports ambitious strategies around sustainable built environment and reduction of both operational and embodied emissions associated to buildings. The efforts of our industry to provide solutions to meet these goals require a solid and well understood level playing field when it comes to assessing, disclosing and reducing carbon emissions. This is why we support the Level(s) framework and its supporting Life Cycle Analysis (LCA) methodology anchored in agreed standards for products (EN15804) and buildings (EN15978).

In this context, it is very important to carefully address, in the context of the LCA, the accounting of
temporary carbon storage. Indeed, recognizing the specific role of carbon storage linked to certain solutions should not, from our perspective, distort how other buildings solutions are being assessed, or encouraged in their decarbonisation journey. As mentioned earlier, separate accounting for carbon storage is needed.

The construction industry has recently seen the implementation of an over simplified version of a LCA methodology, in the French Regulation RE2020, applied at building level, and which consists of different weighting coefficients in the LCA evaluation based on life cycle stage considered. Common and internationally scientifically agreed European LCA methodologies such as EN15804 or EN15978 account for every carbon emitted in a similar way, regardless of when emitted.

A careful consideration is needed as simplified LCA approaches, such as in France, create an artificial reality whereby a large part of carbon is "saved“ or "stored“ for products that contain sequestrated carbon early in the life cycle, but downplaying the fact that these products have a high End-of-Life environmental impacts. In fact, such an approach will just shift the emissions and impacts to the future generations as they act in a "discounting" rather than a "dynamic“ effect. This could cause a reverse effect to the objective of carbon removals and negatively impact the realization of EU climate targets for 2050 and beyond.

There are a lot of efforts to ensure that carbon emissions reduction accounting is harmonized, structured and transparently documented. A well-designed Certification of Carbon removals is an opportunity to create a level playing field for many different solutions that could contribute to carbon neutrality.

Should you wish to provide additional information (for example a position paper) or raise specific points not covered by the questionnaire, you can upload your additional document here.

Any document you upload will be published alongside your replies to the questionnaire, which is the essential input for this public consultation. An uploaded document is an optional addition and will serve as further background reading to better understand your position.
